SUBJECT INDEX TO VOLUME 14

A

Adsorption
of fibrinogen on artificial surfaces, effects of on platelets, 117-128
of organic molecules onto montmorillonite, 255-268
Affinity inversion, surfactant-oil-water systems near, 401-416
Amino acids, free, partition of between stratum corneum model lipids and corneocytes, 481-498
Ammonium hydroxide analogue, of a water/sodium dodecyl sulfate/pentanol microemulsion base, diffusion coefficients in, 685-702
Anionic-cationic systems, optimum formulation and phase behavior of, 401-416
Aqueous dispersions
of oil-coated poly(acrylic acid) particles, preparation and characterization of, 427-436
polyurethane cationomer based, preparation of, 417-425
Asymmetry, in liposome, 675-683

B

Baculovirus polyhedra particulate system, preparation and characterization of, 703-713
Biological filtration, dispersed flow model
experimental confirmation of, 191-203
mathematical model for, 173-190

C

Calcium ion concentration, extremely high, carboxymethyl ethoxylate ultralow interfacial tension systems with
interfacial tension and formulation principle of, 465-479
micellar properties of, 313-332
solubilization of crude oil in, 295-312
Calcium oxalate
hydrates, induction of crystallization of in micellar solutions of surfactants, 355-371
inhibition of crystal growth of by glycosaminoglycanes, 35-46
Carboxymethyl ethoxylates, ultralow interfacial tension systems formulated with
micellar properties of, 313-332
solubilization of crude oil in, 295-312
Cationic surfactants
ion-pair formation between ionized indomethacin and, 609-624
with different polar head group, influence of on adsorption of organic molecules onto montmorillonite, 255-268

Cellulose-acetate fibers, role of cosurfactant and oil in dyeing of, 17-33
Chitosan, selective flocculation with, in *E. coli* disintegrates, 269-293
Coagulation (book review), 604-605
Colloid and surface chemistry, Kendall Award addresses 1973-1990 (book review), 130
Concentrated parenteral fluorocarbon emulsion, a phenomenological model for the surfactant interfacial configuration in, 517-526
Copolymerization, in a nonaqueous lyotropic liquid crystal, 205-235
Corneocytes, and stratum corneum model lipids, partition of free amino acids between, 481-498
Cosmetic materials (book review), 603
Cosurfactant, role of in dyeing of cellulose-acetate fibers, 17-33
Crude oil, solubilization of in ultralow interfacial tension systems formulated with carboxymethyl ethoxylates under extremely high calcium ion concentration, 295-312
Crystal growth
  of calcium oxalate, inhibition of by glycosaminoglycanes, 35-46
  induction of in calcium oxalate hydrates in micellar solutions of surfactants, 355-371
Crystallization
  effects of surfactants on, 625-644
  induction of, of calcium oxalate hydrates in micellar solutions of surfactants, 355-371

D

Defoamers, silicone, performance of in an aqueous foaming medium, 447-463
Demulsification, of water-in-crude oil emulsion, 541-557
Detergency, textile, at low temperature, 645-660
Diffusion coefficients, in a water/sodium dodecyl sulfate/pentanol microemulsion base and its ammonium hyroxide analogue, 685-702
Drop breaking, influence of turbulence and viscosities on the kinetics of, 373-394
Dyeing of cellulose-acetate fibers, role of cosurfactant and oil in, 17-33

E

E. coli. See Escherichia coli
Electro-optical optical determination, of α-FeOOH particle sizes, 499-512
Emulsification, of β-lactoglobulin concentrate, effects of pH on, 335-354
Emulsification properties, of polyethyleneglycol based nonionic surfactants, 237-243
Emulsifier, grafted polyethyleneglycol on polymethylmetacrylate as, 47-70
Emulsions
  concentrated parenteral fluorocarbon, a phenomenological model for the surfactant interfacial configuration in, 517-526
  fundamentals and applications in the petroleum industry (book review), 251-252
  oil-water, containing magnetite particles in the oil phase, formation of globules not containing magnetite particles in, 437-445
  water, effects of interfacial polyurea film on stability of oil in, 71-86

water in crude oil, demulsification of, 541-557
Escherichia coli disintegrates, selective flocculation with chitosan in, 269-293

F

Fatty alcohols, unsaturated long chain, as enhancers of solubility for methanol in nonaqueous triolein solutions, 1-16
α-FeOOH particle sizes, electro-optical determination of, 499-512
Fibrinogen adsorption, on artificial surfaces, and its effects on platelets, 117-128
Film, interfacial polyurea, effects of on the stability of oil in water emulsions, 71-86
Flocculation
(book review), 604-605
selective, with chitosan in *E. coli* disintegrates, effects of ionic strength and multivalent metal ions on, 269-293
Fractal dimensions (book review), 513-514, 715-716
Free amino acids, partition of between stratum corneum model lipids and corneocytes, 481-498

G

Gelation, of β-lactoglobulin concentrate, effects of pH on, 335-354
Glycosaminoglycanes, inhibition of crystal growth of calcium oxalate by, 35-46
Graft copolymers, as emulsifiers, 47-70
Grafted polyethyleneglycol on polymethylmetacrylate, used as emulsifier, 47-70

H

Heterogeneous chemistry, fractal approach (book review), 513-514, 715-716
History of science, nineteenth century attitudes (book review) 249-250

I

Image analysis, application of to measurement of dynamic surface tension using oscillating jet method, 661-673
Indomethacin, ionized, ion-pair formation between cationic surfactants and, 609-624
Interfacial configuration, surfactant, a phenomenological model for in a concentrated parenteral fluorocarbon emulsion, 517-526
Interfacial polyurea film, effects of on stability of oil in water emulsions, 71-86
Interfacial properties, of stearic acid, 559-602
Interfacial tension, of ultralow interfacial tension systems formulated with carboxymethyl ethoxalates under extremely high calcium ion concentration, 465-479
Interfacial tension systems, ultralow, with carboxymethyl ethoxylate under extremely high calcium ion concentration
interfacial tension and formulation principle of, 465-479
micellar properties of, 313-332
solubilization of crude oil in, 295-312
Ion-pair formation, between ionized indomethacin and cationic surfactants, 609-624
Ionic strength, effects of on selective flocculation, 269-293

L

β-Lactoglobulin concentrate, effects of pH on gelation and emulsification of, 335-354
Lipid interaction, olive oil minor surface active, with proteins at oil-water interfaces, role of diglycerides, monoglycerides, and free fatty acids in, 527-539
Lipids, stratum corneum model, and corneocytes, partition of free amino acids between, 481-498
Liposome, asymmetry in, 675-683
Liquid crystal, nonaqueous lyotropic, copolymerization in, 205-235
Low temperature, textile detergency at, 645-660

M

Macromolecular assemblies in polymeric systems (book review), 130-132
Magnetite particles, oil-water emulsions containing in the oil phase, formation of globules not containing magnetite particles, 437-445
Mathematical modeling
of dispersed flow model biological filtration, 173-190
of pH-dependent surface and interfacial properties of stearic acid, 559-602
of substrate removal in microbial film reactors, 135-149
Methanol, solubility and related phenomena of in nonaqueous triolein solutions in the presence of added unsaturated long chain fatty alcohols, 1-16
Micellar properties, of ultralow interfacial tension systems formulated with carboxymethyl ethoxylates under extremely high calcium ion concentration, 313-332
Micellar solutions, of surfactants, induction of crystallization of calcium oxalate hydrates in, 355-371
Micelles (book review), 603-604
Microbial film reactors, substrate removal in
experimental confirmation and practical application of, 151-172
mathematical model for, 135-149
Microemulsion base, water/sodium dodecyl sulfate/pentanol, and its ammonium hydroxide analogue, diffusion coefficients in, 685-702
Montmorillonite, effect of cationic surfactants with different polar head group on adsorption of organic molecules onto, 255-268
Multivalent metal ions, effects of on selective flocculation, 269-293

N

Nonaqueous lyotropic liquid crystal, copolymerization in, 205-235

O

Oil
role of in dyeing of cellulose-acetate fibers, 17-33
stability of in water emulsions, effects of interfacial polyurea film on, 71-86
Oil-water interfaces, role of diglycerides, monoglycerides, and free fatty acids in olive oil minor surface-active lipid interaction with proteins at, 527-539
Optimum formulation, of mixed anionic-cationic systems, 401-416
Organic molecules, adsorption of onto

montmorillonite, 255-268
Oscillating jet method, measurement of dynamic surface tension using, application of image analysis to, 661-673

P

Particles
oil coated poly(acrylic acid), aqueous dispersions of, preparation and characterization of, 427-436
sizes
analysis of (book review), 606
of α-FeOOH, electro-optical determination of, 499-512
Particulate system, Baculovirus polyhedra, preparation and characterization of, 703-713
Petroleum industry
emulsion fundamentals and applications in (book review), 251-252
surfactant applications in, 87-116
pH, effects of on gelation and emulsification of a β-lactoglobulin concentrate, 335-354
pH-dependent surface and interfacial properties, of stearic acid, mathematical modeling of, 559-602
Phase behavior, of anionic-cationic systems, 401-416
Platelets, effects of fibrinogen adsorption on artificial surfaces on, 117-128
Polyethyleneglycol based nonionic surfactants, surface activity and emulsification properties of, 237-247
Polymer latexes (book review), 715
Polymeric materials, biomedical applications of (book review), 718
Polyurethane cationomer based aqueous dispersions, preparation of, 417-425
Proteins, olive oil minor surface-active lipid interaction with at oil-water interfaces, 527-539

S

Scientific research: fraud, compromise, and political influence in (book review), 395-396
Silicone defoamers, performance of in an aqueous foaming medium, 447-463
Solubilization
of crude oil, 295-312
and related phenomena, in nonaqueous triolein/unsaturated long chain fatty alcohol/methanol solutions, 1-16
Stability testing (book review), 514
Stearic acid, mathematical modeling of some pH-dependent surface and interfacial properties of, 559-602
Substrate removal, in microbial film reactors
experimental confirmation and practical application of, 151-172
mathematical model for, 135-149
Surface activity, of polyethyleneglycol based nonionic surfactants, 237-243
Surface properties, ph dependent, of stearic acid, 559-602
Surface tension, dynamic, measurement of using oscillating jet method, application of image analysis to, 661-673
Surfactant interfacial configuration, a phenomenological model for in a concentrated parenteral fluorocarbon emulsion, 517-526
Surfactant-oil-water systems, near the affinity inversion, 401-416
Surfactants
applications of in petroleum industry, 87-116

[Surfactants *continued*]
cationic
ion-pair formation between ionized indomethacin and, 609-624
with different polar head group, influence of on adsorption of organic molecules onto montmorillonite, 255-268
effects of on crystallization phenomena, 625-644
induction of crystallization of calcium oxalate hydrates in micellar solutions of, induction of crystallization of calcium oxalate hydrates in, 355-371
interaction of with polymers and proteins (book review), 605-606
polyethyleneglycol based nonionic, surface activity and emulsification properties of, 237-247
polymeric (book review), 129-130

T

Temperature, low, textile detergency at, 645-660
Textile detergency, at low temperature, 645-660
Turbulence, influence of on the kinetics of drop breaking, 373-394

V

Viscosities, influence of on the kinetics of drop breaking, 373-394
Vroman effect (book review), 396-397

W

Water emulsions, effects of interfacial polyurea film on stability of oil in, 71-86
Wettability (book review), 717-718
